

Seminar: Higher algebraic K-theory

Contact: T. Dyckerhoff (dyckerho@math.uni-bonn.de), G. Jasso (gjasso@math.uni-bonn.de)

Meeting time: Wednesday 10:15-11:45

Location: SR 0.007

Description: The plan is to study various approaches to higher algebraic K -theory beginning with the foundational work of Quillen. We will use original references accompanied by the book [14].

Talks:

1. (Oct 11) Introduction and survey of pre-Quillen history [13, 14].
2. (Oct 18) Explain Quillen's definition of the higher K -groups via the Plus-construction [8, 14].
3. (Oct 25) K -theory of finite fields: Sketch the contents of [8, 14].
4. (Nov 8) Quillen's Theorem A and B [9, §1], optionally discuss ∞ -categorical version from [7].
5. (Nov 15) Additivity [9, §2,§3].
6. (Nov 22) Devissage and Localization [9, §4,§5].
7. (Nov 29) Γ -spaces and Segal delooping [11].
8. (Dec 13) Waldhausen K -theory: Explain S_\bullet -construction and additivity [12], possibly also for stable ∞ -categories [6].
9. (Dec 20) K -theory of spaces: [12], also explain ∞ -categorical interpretation [6].
10. (Jan 10) Variants of K -theory: Grothendieck-Witt groups, Hermitian K -theory, see [10] and references.
11. (Jan 17) Real algebraic K -theory: [5].
12. (Jan 24) Cyclic homology and K -theory: Survey the paper [1].
13. (Jan 31) Goodwillie calculus: Sketch Goodwillie's calculus of functors and its application to the K -theory of spaces [3, 2, 4].
